Deadline for manuscript  
submissions:

**31 December 2022**

### Message from the Guest Editors

Dear Colleagues,

A wide range of microorganisms live in association with plants, including diazotrophic bacteria, mycorrhizal fungi, plant growth-promoting rhizobacteria (PGPR), and leaf and seed endophytes. These microorganisms provide the plant with nitrogen and phosphorus in assimilable form, facilitate water uptake, produce plant hormones, and enhance the tolerance of plants to abiotic and biotic stresses. Probably the most well-known beneficial association is the nitrogen-fixing symbiosis between soil rhizobia and legume roots. However, other symbioses are also very relevant. Mycorrhizal fungi improve the nutrient status of their host plants and actinorhizal plants are used for timber and reclamation of degraded lands. Moreover, there is an upsurge of interest in the study of plant microbiomes and of mechanisms underlying the interactions of plants with fungal and bacterial endophytes because they enhance crop yield.

This Special Issue will comprise original research articles covering physiology, biochemistry, genetics, genomics, evolution and agricultural applications of beneficial microorganisms and of their host symbiotic partners.

an Open Access Journal by MDPI

## Editors-in-Chief

### Prof. Dr. Jukka Finne

Research Programme in  
Molecular and Integrative  
Biosciences, Faculty of Biological  
and Environmental Sciences,  
University of Helsinki, P. O. Box  
56, FI 00014 Helsinki, Finland

### Prof. Dr. Andrés Moya

Integrative Systems Biology  
Institute, University of Valencia  
and CSIC, 46980 Valencia, Spain

## Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

## Author Benefits

**Open Access:**— free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and many other databases.

**Journal Rank:** JCR - Q1 (*Biology*) / CiteScore - Q1 (*General Agricultural and Biological Sciences*)
